

WB- Plate

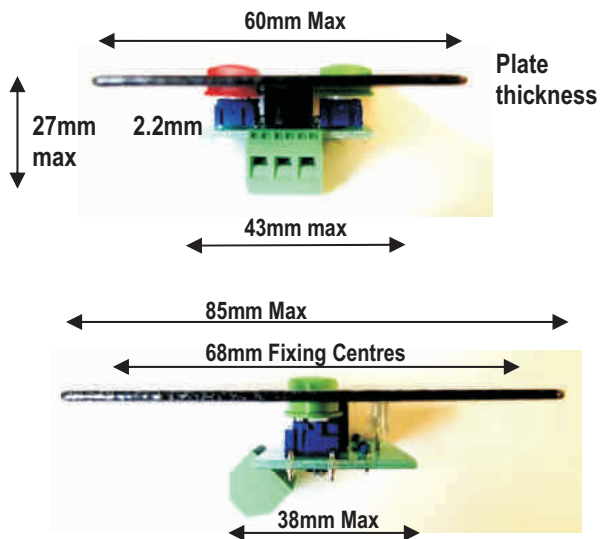

Wired Button Plate

Following a call from one of our customers we have developed a wired button plate for the integrators. This simple product can be used to finish off any installation of MasterCue V6 where mounting is on timber construction and a simple flat flush finish is required, specifically for podiums and lecterns. Wiring is via screw clamps to maintain an industry standard.

Main Features

- ✓ Surface mount
- ✓ Screw fixing
- ✓ Reliable
- ✓ Back up

3 Year Limited Factory Warranty

We recommend additional cable fixing for support. A single screw is used for fixing the circuit board to the plate and some rotation may occur, check and centre at installation.
